nDimensions.Ai Brand Book

Oct 12, 2026 · @Upendra

Brand at a glance

nDimensions.Ai is a non-profit group of independent AI researchers who build, test and publish AI work in the open, purely out of love for the field. This book sets the rebrand that replaces the earlier nDimensions.ai identity, effective 12 October 2026.

Element	Decision
Name	nDimensions.Ai
Tagline	Independent AI research
Mark	∂^n, the partial-derivative sign raised to the power n
Primary logo	Stacked: ∂^n above the NDIMENSIONS.AI wordmark
Core colors	Void navy #0A0B1A, Paper #F5F6FB, Signal mint #5FE3D0
Typefaces	Sora (brand and headings), JetBrains Mono (labels and code)
Projects	PANINI CLI, PINGALA Agent, PANINI personal autonomous agent, PANINI-ANIMGX, Decoding Language Models

One rule carries the whole identity: navy and white do the work, and mint marks the single thing that matters, usually the n.

Name genesis

The name says what modern AI is made of: data and models live in spaces with n dimensions, where n can be any number.

- **n** is the mathematician's placeholder for "any number". An embedding has hundreds of dimensions, a model's weights live in billions, and the group's curiosity has no fixed limit either.

- **Dimensions** names the space where AI actually happens: vectors, matrices and tensors are all points and shapes in n-dimensional space.
- **.Ai** marks the field. It is written with a capital A and lowercase i so it reads as one word, not as two letters.

Together, "n dimensions" is a promise to explore every direction of AI rather than one narrow lane.

How to write it: nDimensions.Ai in running text, with a lowercase n and capital D. The logo sets it in capitals, NDIMENSIONS.AI, for the wordmark only. Short form in casual text: nDimensions. Never: NDimensions, Ndimensions, n-Dimensions or nDimensions.AI in body text.

Logo genesis

The mark is ∂^n: the partial-derivative sign raised to the power n. It joins the one operation every AI model learns by with the name of the group.

- **∂, the partial derivative.** Training a neural network means computing how the loss changes with each parameter, $\partial L/\partial \theta$, then nudging every parameter downhill. Backpropagation is partial derivatives at scale, so ∂ is the most honest symbol of how AI learns.
- **^{n}, the power n.** The superscript is the n of nDimensions. Read as math, ∂^n is an n-th order derivative: going deeper, one dimension at a time.
- **Mint on the n.** The variable is the only colored part, so the eye lands on the idea that changes.
- **Hand-drawn, monoline ∂.** The ∂ is drawn as one continuous rounded stroke, not typed from a font, so it feels like a mathematician's notebook rather than a textbook. The stroke weight matches the wordmark so the lockup reads as one unit.

How it was found. The mark came out of roughly 200 concepts explored on 12 October 2026, in rounds: tesseracts and hypercubes, matrix brackets, matrix-multiplication and GPU icons, ancient Indian mathematics (Pingala, Baudhayana, Katapayadi), Ramanujan's results, computed fractals and attractors, typeset math notation and invented operators. Every round pointed back to the same test: simple enough for a 32 px avatar, unmistakably mathematical, and about how AI learns. ∂^n was the only concept that passed all three, and the stacked lockup with the spaced capital wordmark was locked the same day.

Brand evolution

BEFORE · PREVIOUS IDENTITY

Spirograph ring of rotated rounded stars, purple-to-magenta gradient, extended geometric wordmark. Strong as a texture, but heavy at avatar size and not tied to an idea about AI.

AFTER · 2026 REBRAND

One hand-drawn ∂ raised to n. Flat navy, paper and one mint accent. Reads at 16 px and says what the group studies: how AI learns.

The previous identity used a spirograph ring of rotated rounded stars, a purple-to-magenta gradient (about #534099 to #CD138C) and a custom extended wordmark set as nDimensions.AI. Its guidelines document was a starter template: it described a generative-AI training and consultancy company, still mentioned a different working name (Gravitons.ai), and listed font options without choosing any.

Why we changed it

- **Who we are changed.** The old vision and mission were about training, webinars and consulting. nDimensions.Ai is now a non-profit research group, and the identity should say research, not services.
- **The symbol did not scale.** Dense line work turns into a grey blur at a 32 px avatar, and the gradient needs full color to work.
- **The rules were never set.** No fixed colors, fonts, clear space or minimum sizes meant every banner was designed from scratch.

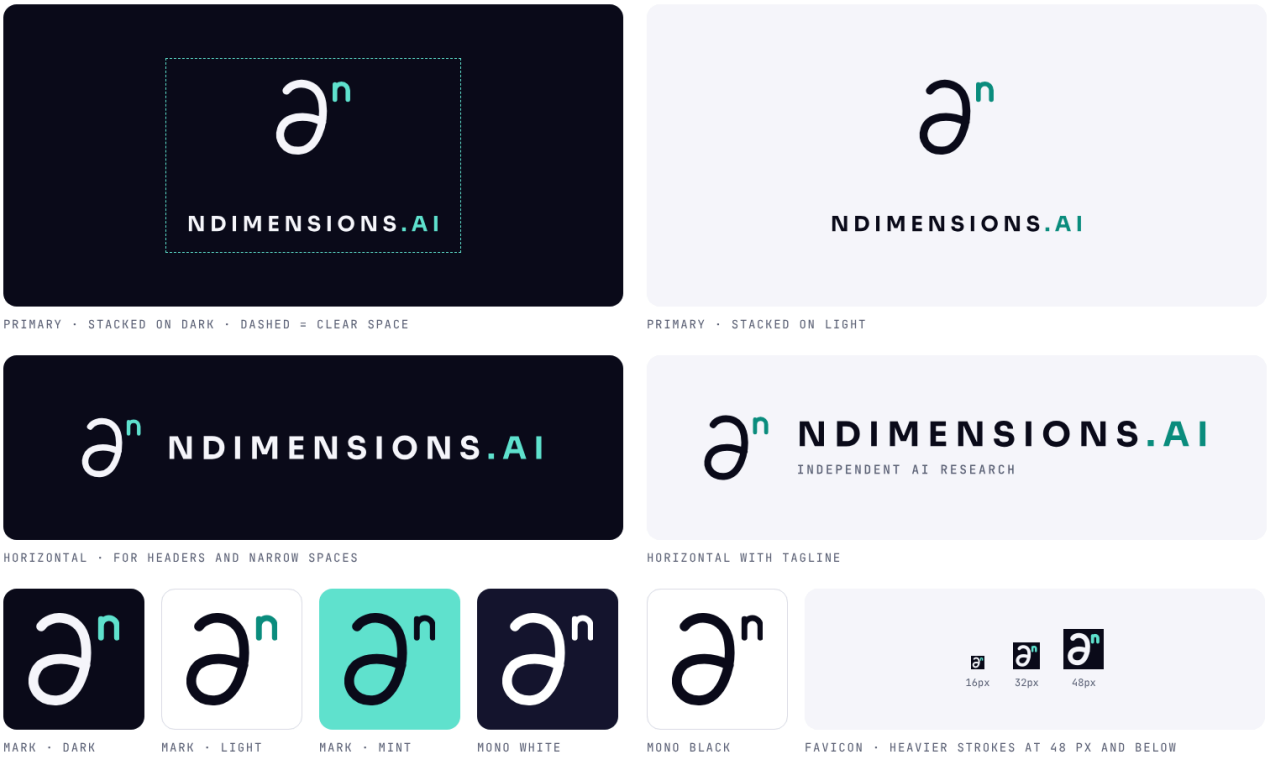

What carries over and what retires

Element	Previous identity	2026 rebrand
Name	nDimensions.AI	nDimensions.Ai (wordmark: NDIMENSIONS.AI)
Symbol	Spirograph ring	∂ⁿ, the partial derivative raised to n
Ground	Dark navy with a glow	Flat Void navy #0A0B1A (kept, simplified)

Element	Previous identity	2026 rebrand
Accent	Purple to magenta gradient; cyan listed as an option	Signal mint #5FE3D0 (the cyan idea, made exact)
Type	Undecided (Montserrat, Roboto, Poppins, Open Sans, Lato)	Sora and JetBrains Mono
Positioning	AI training and consultancy	Independent, non-profit AI research

From 12 October 2026, stop using the old files: the ring symbol, the combination logos, the gradient symbol and the old LinkedIn banners. Keep them in an archive folder for reference only.

Logo system

Lockups

Lockup	Use it for	Files
Stacked (primary)	LinkedIn cover, posters, title slides, anything square or tall	ndimensions-stacked-*
Horizontal	Website header, email signature, wide banners	ndimensions-horizontal-*
Horizontal with tagline	Link previews, event banners, presentation title slides	ndimensions-horizontal-tagline-*
Mark ðⁿ	Avatars, favicons, app icons, watermarks	ndimensions-mark-, *ndimensions-mark-tile-*
Wordmark	Footers, or when the mark is already close by	ndimensions-wordmark-*

Use the stacked logo whenever it fits. Use the mark alone only where the name is already visible, such as next to the page name on LinkedIn.

Colorways

- **On dark (default):** paper ð and letters, signal mint ⁿ and .AI, on Void navy.
- **On light:** Void navy ð and letters, deep mint ⁿ and .AI, on white or paper.
- **Mono white and mono black:** one color only, for one-color print, engraving, stamps and partner pages that need a single color.
- **Mint tile:** an all-navy mark on signal mint. Use it for stickers and special moments, never as the everyday logo.

Clear space

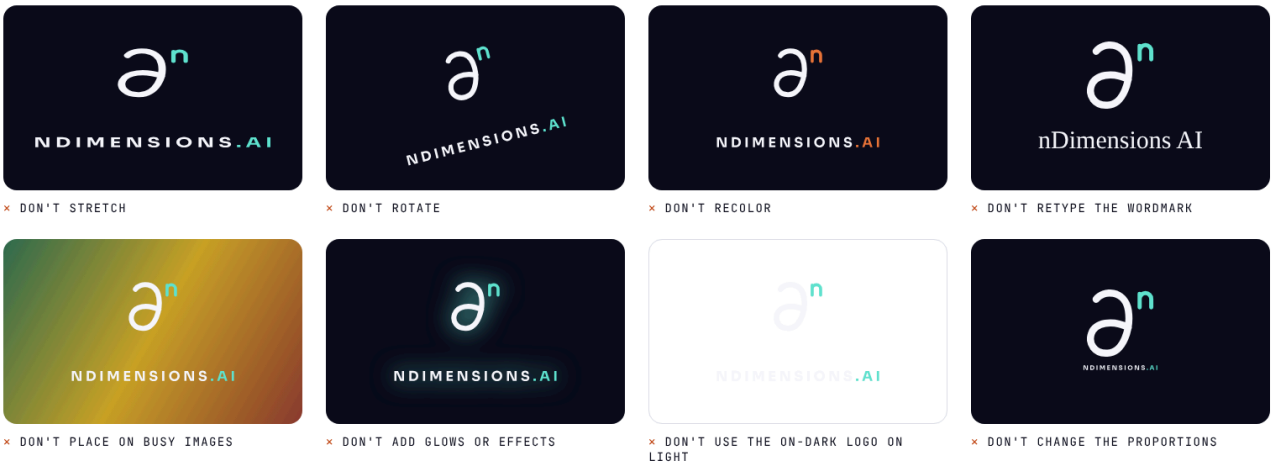

Keep empty space around the logo equal to the height of the ⁿ on every side. Every SVG and PNG in the package already includes this space, so place the files as they are and do not crop them.

Minimum size

Lockup	Smallest on screen	Smallest in print
Stacked	140 px wide	35 mm wide
Horizontal	160 px wide	40 mm wide
Horizontal with tagline	300 px wide	75 mm wide
Wordmark	130 px wide	32 mm wide
Mark	16 px	6 mm

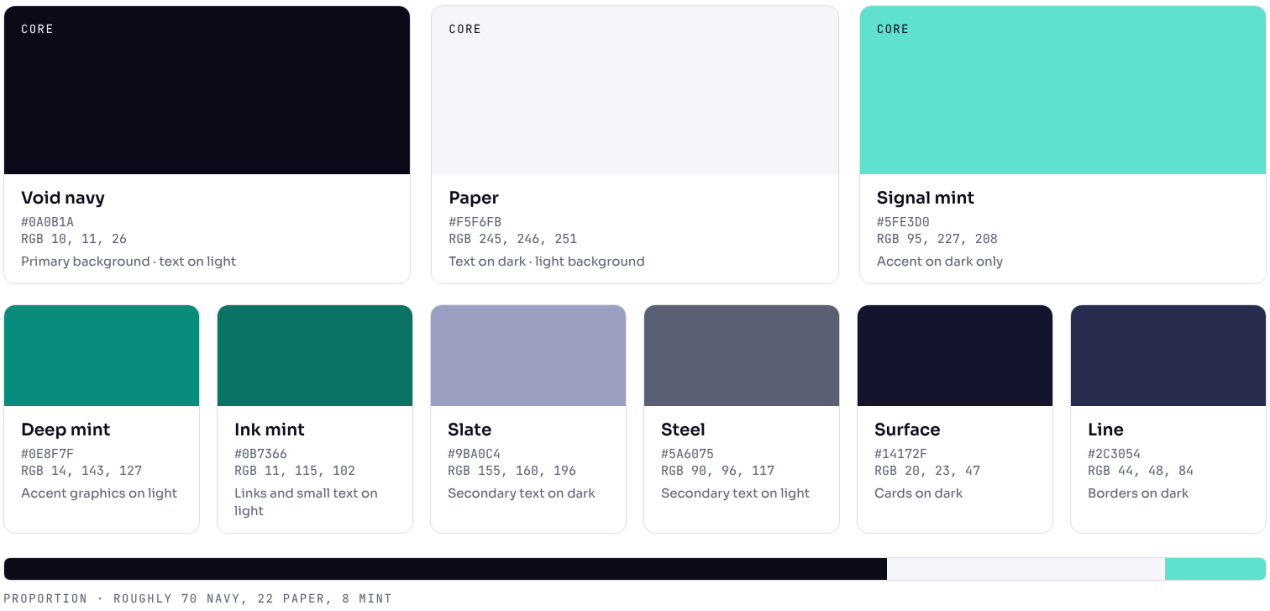

At 48 px and below, use the favicon version of the mark. It has heavier strokes so the ð and the ⁿ stay open.

Don'ts

Do not stretch, rotate, recolor, retype, outline, add glows or shadows to the logo, place it on a busy photo, put the on-dark version on a light background, or change the size of the mark relative to the wordmark. Always start from the files in the package.

Color palette

Three core colors carry the brand. Navy does most of the work, paper carries the words, and mint points at one thing.

Color	Hex	RGB	Role
Void navy	#0A0B1A	10, 11, 26	Main background, text on light
Paper	#F5F6FB	245, 246, 251	Text on dark, light background
Signal mint	#5FE3D0	95, 227, 208	The single accent, on dark only
Deep mint	#0E8F7F	14, 143, 127	Mint for graphics and large text on light
Ink mint	#0B7366	11, 115, 102	Links and small mint text on light
Slate	#9BA0C4	155, 160, 196	Secondary text on dark
Steel	#5A6075	90, 96, 117	Secondary text on light
Surface	#14172F	20, 23, 47	Cards and panels on dark
Line	#2C3054	44, 48, 84	Borders and dividers on dark
Light line	#DDE0EA	221, 224, 234	Borders and dividers on light

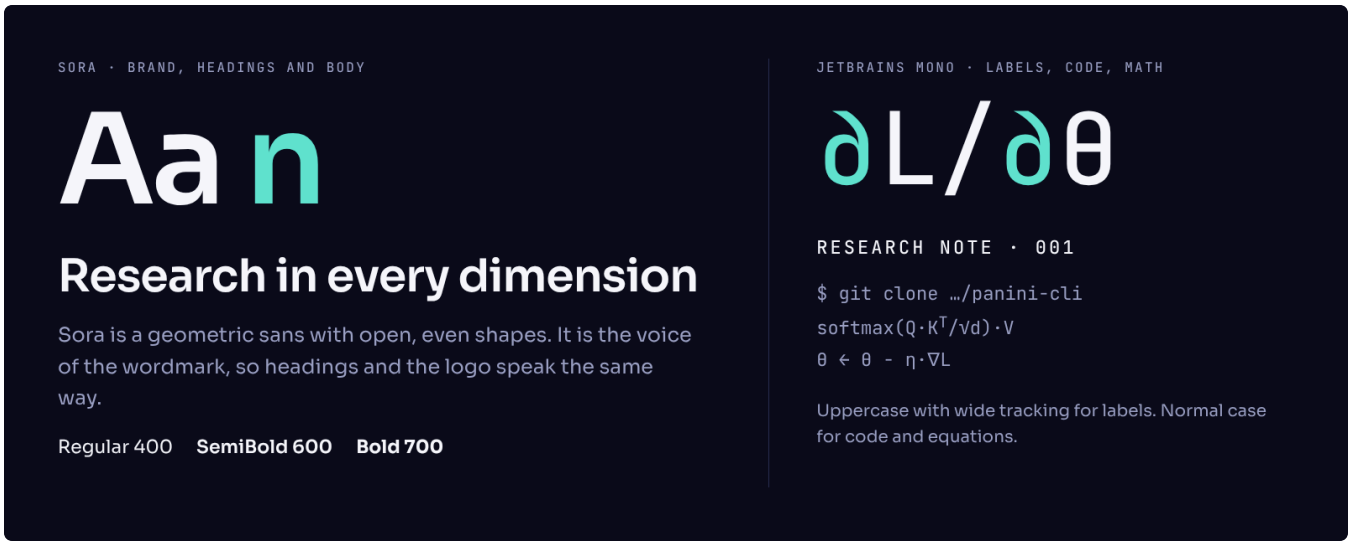

Contrast (WCAG 2.2)

Text on background	Ratio	Passes
Paper on Void navy	18.1 : 1	AAA
Signal mint on Void navy	12.4 : 1	AAA
Slate on Void navy	7.6 : 1	AAA
Slate on Surface	6.9 : 1	AA
Void navy on white	19.5 : 1	AAA
Steel on white	6.2 : 1	AA
Ink mint on white	5.7 : 1	AA
Deep mint on white	4.0 : 1	AA for large text and graphics only
Void navy on Signal mint	12.4 : 1	AAA

Rules

- **Dark first.** Void navy is the default background for every brand moment: covers, posts, slides and the website.
- **Mint is a signal, not a fill.** Use it for one thing per view: the ^{n}, one key word, one link or one number. Keep mint to under a tenth of any layout.
- **Light backgrounds swap the mint.** Signal mint fails contrast on white, so light layouts use Deep mint for graphics and large text and Ink mint for links and small text. Deep mint #0E8F7F replaces the earlier light-mode mint #12B5A0, which was only 2.6 : 1 on white.
- **Flat color only.** No gradients, glows or neon effects. The old purple-to-magenta gradient is retired.
- **Print.** Supply files in sRGB, ask the printer to convert with their profile and approve a printed proof before any large run.

Typography

Two free, open-licensed typefaces (SIL Open Font License), both on Google Fonts. Free type suits a non-profit, and anyone in the group can install them.

Typeface	Weights	Use it for
Sora	Regular 400, SemiBold 600, Bold 700	The wordmark, headings, body text and buttons
JetBrains Mono	Regular 400, Medium 500	Labels, tags, code, equations and numbers in tables

Type scale

Style	Desktop size / line height	Mobile	Font and weight
Display	72 / 76 px	40 / 44 px	Sora 600, tracking −2%
Heading 1	48 / 56 px	32 / 38 px	Sora 600, tracking −1.5%
Heading 2	36 / 44 px	26 / 32 px	Sora 600
Heading 3	24 / 32 px	20 / 28 px	Sora 600

Style	Desktop size / line height	Mobile	Font and weight
Body large	20 / 32 px	18 / 28 px	Sora 400
Body	17 / 28 px	16 / 26 px	Sora 400
Small	14 / 22 px	14 / 22 px	Sora 400
Label	13 / 16 px	12 / 16 px	JetBrains Mono 500, uppercase, tracking +14%
Code and math	15 / 24 px	14 / 22 px	JetBrains Mono 400

Rules

- Headings in sentence case. Capitals only for mono labels and the wordmark.
- Emphasis comes from weight or from mint, never from italics or underlines (links excepted).
- Equations, code, file names and version numbers are always in JetBrains Mono. It includes ð, θ, Σ, √ and arrows.
- Never use Sora to imitate the wordmark. The wordmark is artwork: place the file.
- Fallback stacks: Sora → system-ui, sans-serif. JetBrains Mono → ui-monospace, monospace.

Voice and messaging

Core lines

Line	Text
Tagline	Independent AI research
Headline	We study how AI learns, in every dimension.
Mission	Explore how AI learns, in the open, and share everything we find.
Vision	AI that more people can understand, question and build on.

The mission and vision replace the earlier training-company statements, which no longer describe the group.

Boilerplate

One line: nDimensions.Ai is a non-profit group of independent AI researchers.

Short: nDimensions.Ai is a non-profit group of independent AI researchers who build, test and publish AI work in the open, purely out of love for the field.

Long: nDimensions.Ai is a non-profit group of independent AI researchers. We build, test and publish AI work in the open, as a hobby and out of love for the field. Our projects include PANINI CLI, an open-source AI command-line tool; PINGALA Agent, a research project on thoughtful candidate screening; PANINI, a personal autonomous agent; PANINI-ANIMGX, a local AI animation studio; and Decoding Language Models, an 84-episode series that takes language models apart one idea at a time.

How we sound

We are	We are not
Curious: we ask why something works	Hype-driven: no "revolutionary" or "game-changing"
Precise: one claim, one source, show the math	Jargon-heavy: define a term the first time it appears

We are	We are not
Open: code, notes and mistakes are shared	Secretive or salesy: we have nothing to sell
Warm: researchers talking to friends	Cold or academic for its own sake

Writing rules

- Lead with the idea, then the evidence. A post should make sense from its first line alone.
- Write "we" for the group and name the researcher when the work is theirs.
- Use real numbers and link the source, the repo or the episode.
- Project names are written as PANINI CLI, PINGALA Agent, PANINI-ANIMGX and Decoding Language Models.
- Use three to five hashtags per post, at the end.

Brand asset package

Everything ships in **nDimensions-brand-package.zip**. Every logo is outlined vector artwork, so no fonts are needed to open or print it.

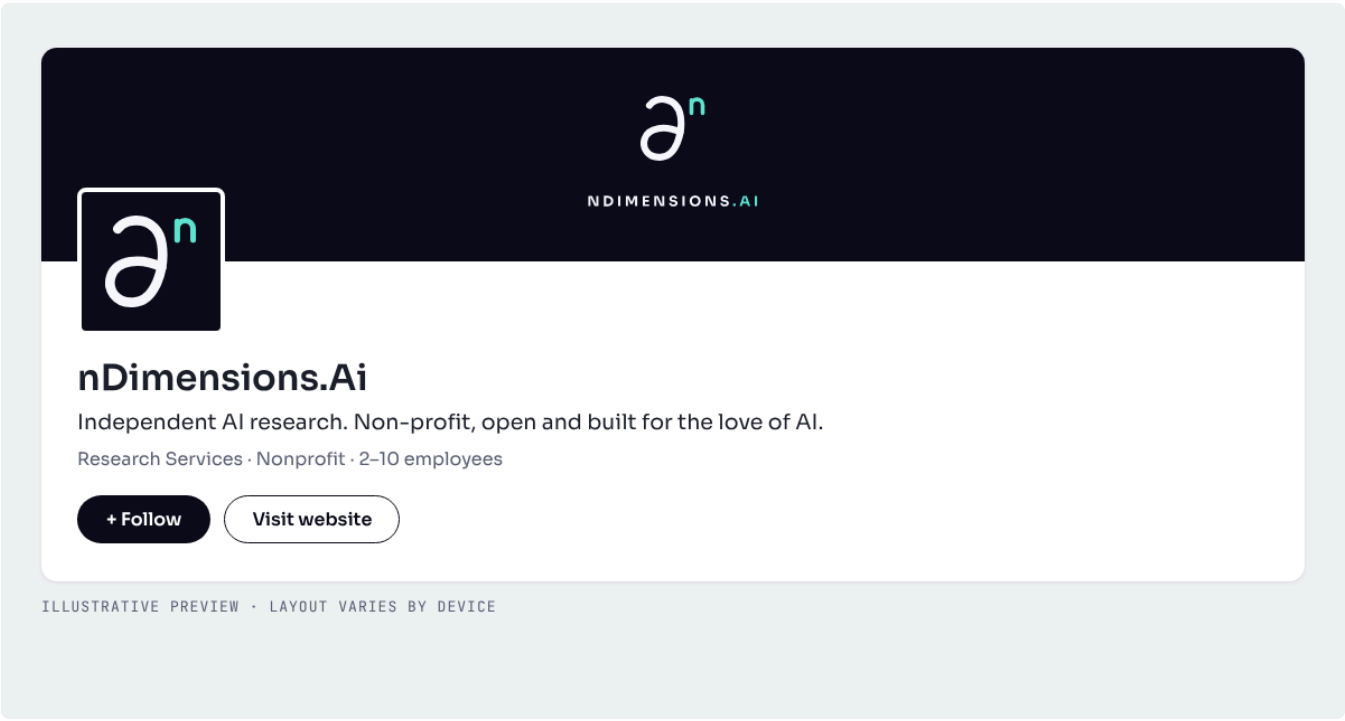

Folder	What is inside	Formats
01-logo/svg	25 master files: stacked, horizontal, horizontal with tagline, mark, wordmark, mark tiles and the two locked 1080 × 400 artboards, each in on-dark, on-light, mono white and mono black	.svg
01-logo/png	72 exports of the same files at two or three sizes each, with transparent backgrounds except tiles and artboards	.png
02-web-icons	favicon.ico (16, 32 and 48 px inside), favicon.svg, favicon PNGs, Apple touch icon (180 px), app icons (192 and 512 px), maskable icon, site.webmanifest and a ready head snippet	.ico, .svg, .png, .webmanifest, .html

Folder	What is inside	Formats
03-linkedin	Page logo, company cover (1× and 2×), member banner, launch post, poster, research note, five project spotlights, page preview, all page and post copy, and editable HTML templates	.png, .svg, .md, .html
04-social	Link preview image (1200 × 630) and a 1080 px avatar for other networks	.png
05-colors	Design tokens for the website and design tools	.css, .json
06-fonts	Where to get Sora and JetBrains Mono, and the web embed code	.md
07-brand-book	This brand book	.pdf

Which file to use

Need	File
A logo for a slide or document on dark	01-logo/png/ndimensions-stacked-on-dark-1200w.png
A logo on a white page	01-logo/png/ndimensions-stacked-on-light-1200w.png
Anything printed or scaled up	The matching .svg in 01-logo/svg
A profile picture anywhere	03-linkedin/ndimensions-linkedin-logo-400.png or 04-social/ndimensions-avatar-1080.png
Browser tab icon	02-web-icons/favicon.ico and favicon.svg
Website header	01-logo/svg/ndimensions-horizontal-on-dark.svg
One-color print or engraving	ndimensions-*-mono-black.svg or mono-white.svg

LinkedIn company page kit

Choose **Company** when LinkedIn asks for the page type, then fill the fields below. All copy, including every post caption, is also in 03-linkedin/linkedin-page-copy.md, ready to paste.

Page fields

About

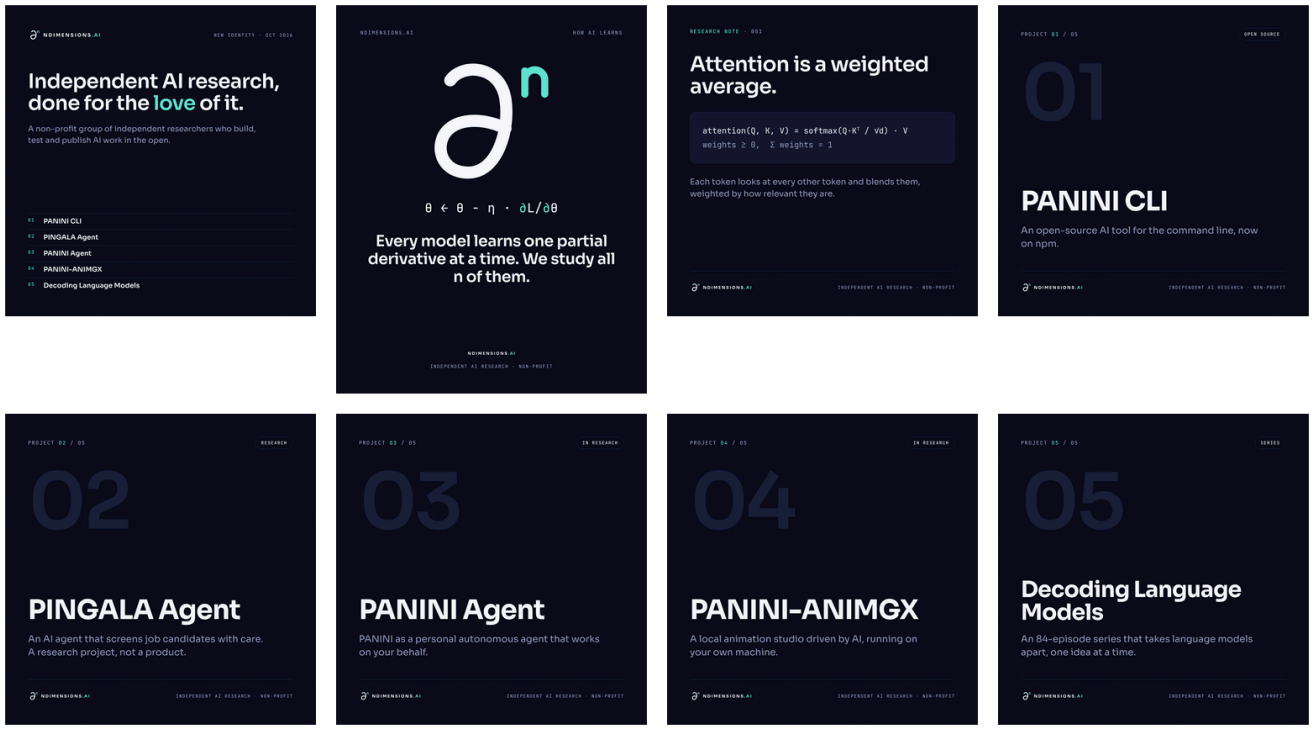

nDimensions.Ai is a non-profit group of independent AI researchers. We build, test and publish AI work in the open, as a hobby and purely out of love for the field.

Our name comes from the space where AI lives: data and models exist in n dimensions. Our mark, ∂^n, is the partial derivative raised to the power n, a nod to how every model learns, one partial derivative at a time.

What we work on: PANINI CLI, an open-source AI tool for the command line, now on npm; PINGALA Agent, an AI agent for thoughtful candidate screening (a research project, not a product); PANINI, a personal autonomous agent; PANINI-ANIMGX, a local animation studio driven by AI; and Decoding Language Models, an 84-episode series that takes language models apart, one idea at a time.

We are not a company and we do not sell anything. Follow the page for research notes, open code and new episodes.

Launch posts

Order	Image	Message
1	Launch post (1200 × 1200)	New look, same love for AI, with all five projects
2	Poster (1080 × 1350)	θ ← θ − η · ∂L/∂θ and why the mark is ∂ⁿ
3–7	Project spotlights 01–05 (1200 × 1200)	One project per post, with its link
8	Research note template (1200 × 1200)	One idea, one equation, one takeaway

Space the first eight posts over three or four weeks. After that, keep a steady rhythm: a project post on Monday, a research note on Wednesday and an episode or behind-the-scenes post on Friday.

Members

- Each researcher adds nDimensions.Ai to their profile, as a workplace or volunteer role, so their photo shows on the page.

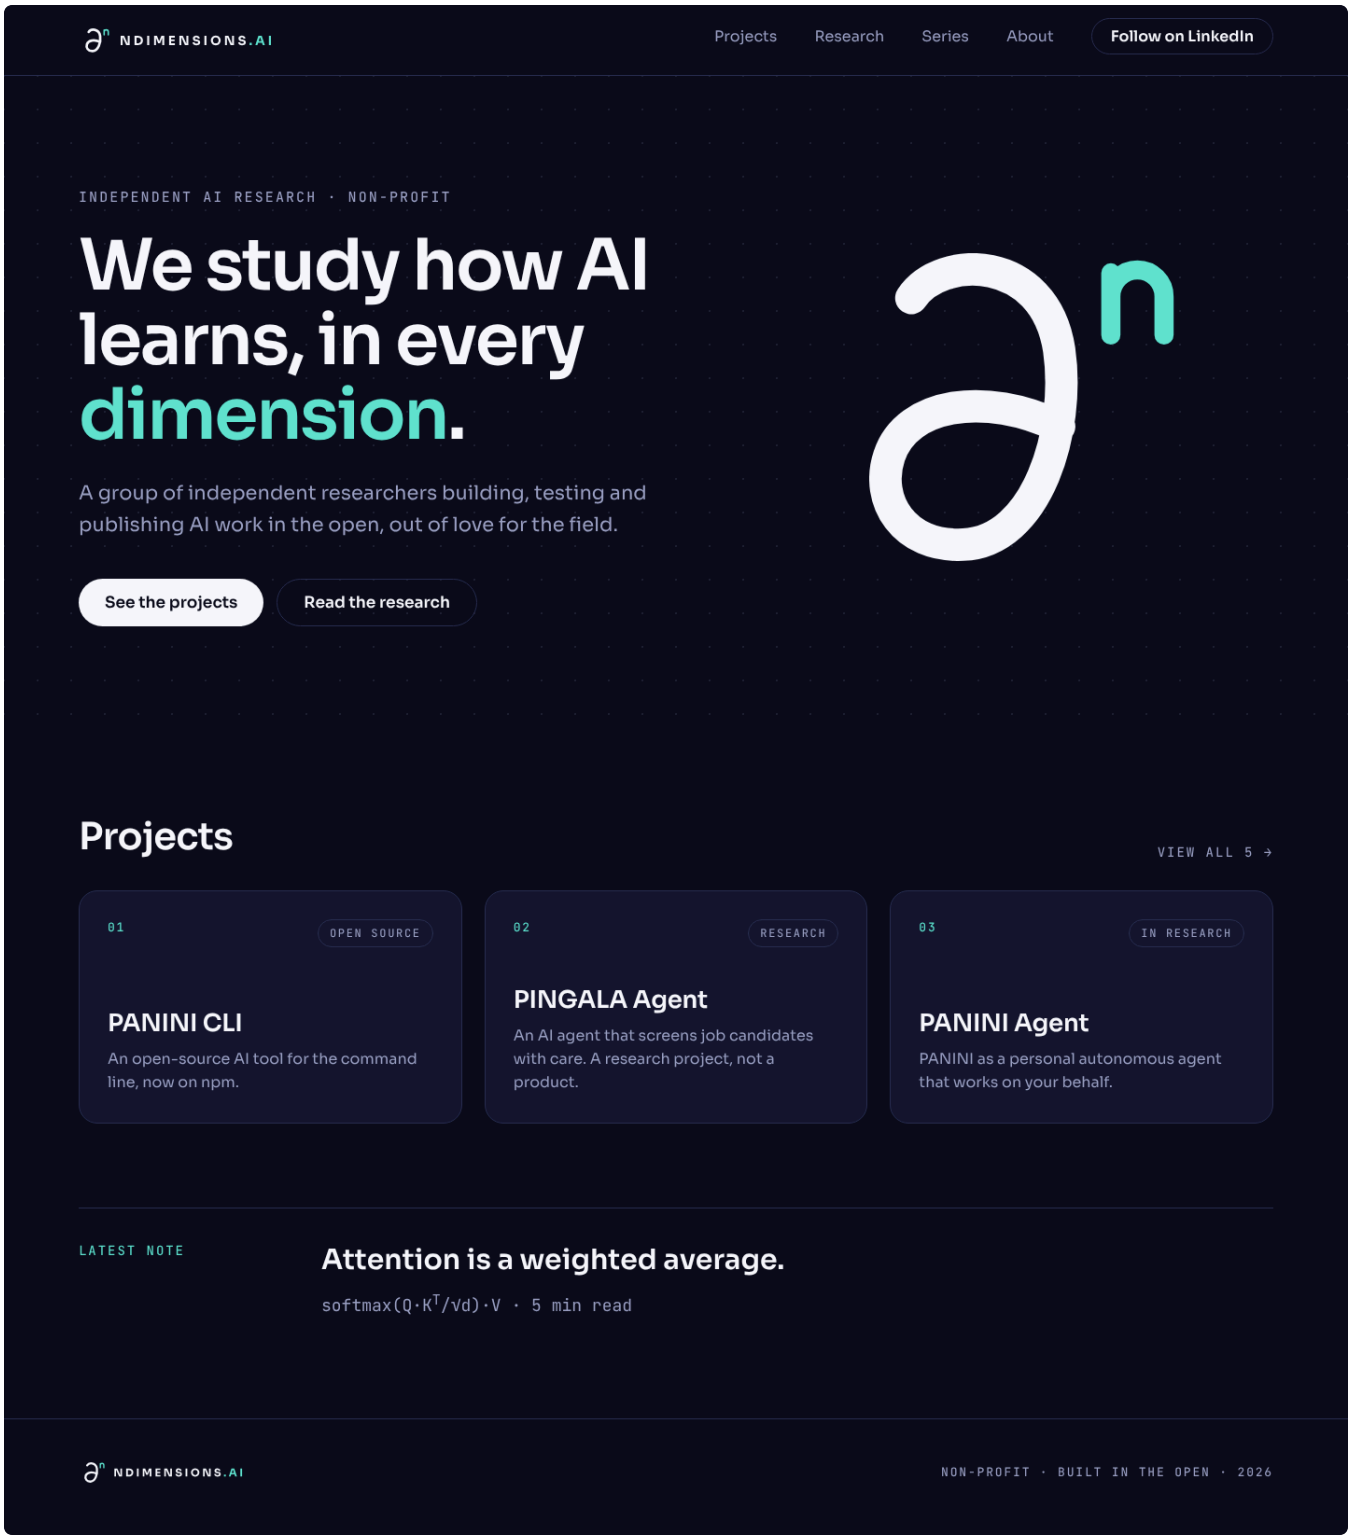

- Members can use ndimensions-member-profile-banner-1584x396.png as their personal LinkedIn banner. The logo sits on the right so the profile photo does not cover it.
- Reshare page posts with one line in your own words, not a bare repost.

Image specs

Asset	Size	Notes
Page logo	400 × 400 px	Mark on Void navy, PNG
Company cover	1128 × 191 px (supplied at 2×)	Logo centered; the left edge stays clear for the page logo
Member banner	1584 × 396 px	Logo right-aligned
Square post	1200 × 1200 px	Launch, projects, research notes
Portrait post	1080 × 1350 px	Poster
Link preview	1200 × 630 px	04-social/ndimensions-og-image-1200x630.png

Editable HTML versions of the post templates are in 03-linkedin/editable-templates. Open one in a browser, change the words, and take a screenshot at the stated size, or rebuild the layout in any design tool using the same grid, type and colors.

Website UI/UX guidelines

Principles

1. **Dark first, calm always.** Void navy background, paper text, one mint accent per screen. No gradients, glows or parallax.

2. **Show the work.** Projects, notes and episodes lead. Every page should get a visitor to real code, a real note or a real video within one click.
3. **Math is the decoration.** Equations in JetBrains Mono, a faint dot grid and the ∂ⁿ mark do the job that stock imagery usually does.
4. **Readable by everyone.** WCAG 2.2 AA everywhere, AAA for body text on dark.

Design tokens

The full set is in 05-colors/tokens.css and tokens.json. Use the tokens, never raw hex values in components.

```
:root {
  --nd-void: #0A0B1A;  --nd-paper: #F5F6FB;  --nd-mint: #5FE3D0;
  --nd-deep-mint: #0E8F7F;  --nd-ink-mint: #0B7366;
  --nd-slate: #9BA0C4;  --nd-steel: #5A6075;
  --nd-surface: #14172F;  --nd-line: #2C3054;  --nd-light-line: #DDE0EA;
  --nd-font-display: 'Sora', system-ui, sans-serif;
  --nd-font-mono: 'JetBrains Mono', ui-monospace, monospace;
  --nd-radius-sm: 6px;  --nd-radius-md: 12px;  --nd-radius-lg: 20px;
  --nd-space-1: 4px; /* then 8, 12, 16, 24, 32, 48, 64, 96 */
}
```

Layout

Breakpoint	Width	Columns	Side margin	Gutter
Mobile	under 640 px	4	20 px	16 px
Tablet	640–1023 px	8	40 px	24 px
Desktop	1024 px and up	12	80 px	24 px

Content is capped at 1280 px wide; running text at about 68 characters per line. Spacing uses the 4 px scale only. Sections are separated by 96 px on desktop and 64 px on mobile.

Components

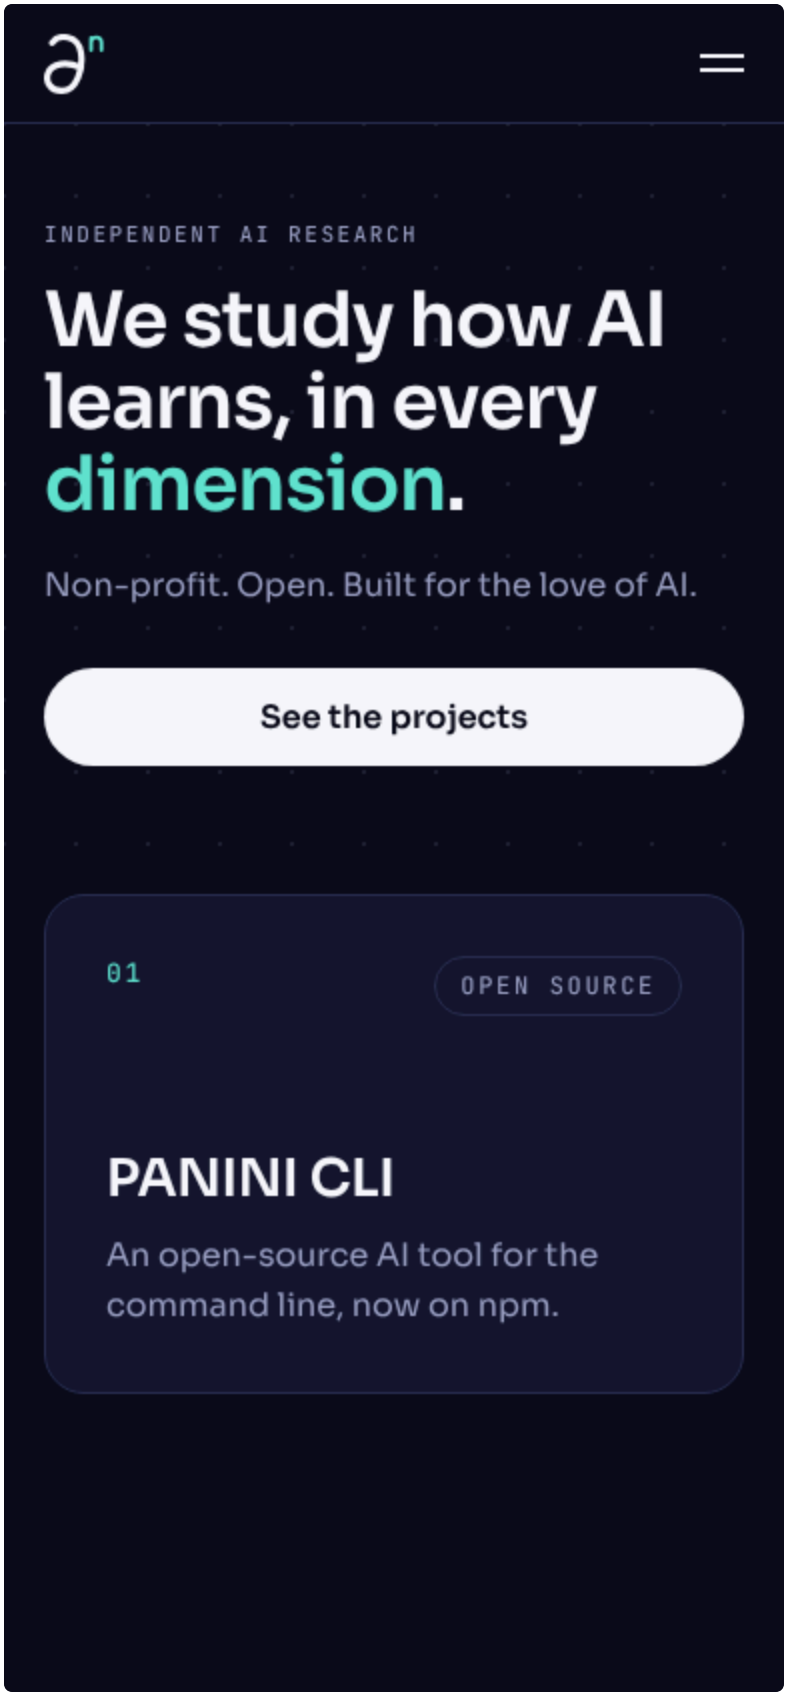

Component	Spec
Primary button	Paper fill, Void text, Sora 600 17 px, fully rounded, 52 px tall
Secondary button	Transparent, 1.5 px Line border, paper text
Text link	Signal mint on dark, Ink mint on light, underline on hover
Card	Surface fill, 1 px Line border, 20 px radius, 28–32 px padding
Tag	JetBrains Mono 500 12 px uppercase, 1 px Line border, fully rounded
Navigation	76 px bar, horizontal logo at 40 px tall on the left, links in Slate turning Paper on hover
Code and equation block	Surface fill, JetBrains Mono 15 px, 20 px radius, copy button top right
Focus ring	2 px Signal mint outline, 2 px offset, on every interactive element

Pages

Page	What it holds
Home	Headline, short intro, three latest projects, latest research note, follow links
Projects	All five projects as cards with status tags: Open source, Research, In research, Series
Project detail	What it is, why we built it, how it works, links to code or video, contributors
Research	Research notes, newest first, each with one equation or figure

Page	What it holds
Series	Decoding Language Models episodes, numbered 01 to 84, with search
About	Mission, the people, the name and logo story, the non-profit promise
Join	How to contribute, follow on LinkedIn, and contact

Mobile

INDEPENDENT AI RESEARCH
We study how AI learns, in every dimension.
Non-profit. Open. Built for the love of AI.
See the projects
01
OPEN SOURCE
PANINI CLI
An open-source AI tool for the command line, now on npm.

The mark alone replaces the horizontal logo in the mobile header. Buttons go full width, cards stack in one column and the headline drops to 40 px. Tap targets are at least 44 × 44 px.

Motion

- 150–250 ms, ease-out, for hover and focus changes. 300 ms for opening and closing panels.
- One signature moment: on the home page the ð draws itself as a single stroke and the ^{n} appears last (under 1.2 seconds, once per visit).
- Respect prefers-reduced-motion: show everything at its final state.

Accessibility

- Every text and background pair must appear in the contrast table in Color palette.
- Give every image alt text. Write equations as text, not images, so screen readers and search engines can read them.
- The full site must work by keyboard, with a skip link to the main content.

Light mode

Offer light mode as an option: Paper or white background, Void text, Steel for secondary text, Deep mint for graphics and Ink mint for links. Signal mint is never used on light backgrounds.

Icons, link previews and performance

Add the snippet from 02-web-icons/head-snippet.html to every page head. It wires up favicon.ico, favicon.svg, the Apple touch icon and the web manifest. Use 04-social/ndimensions-og-image-1200x630.png as the default link preview. Self-host the fonts as WOFF2, preload the two weights used above the fold, and keep each page under 1 MB.
